

## Product Information

# ABGEL CITRUS

### Heavy Duty Hand Cleanser

---

## Description

A powerful heavy-duty hand cleanser containing polyethylene micro-beads for the effective removal of ingrained dirt, grease and grime. Free from petroleum derived solvents but designed to out perform traditional solvent based hand cleansers.

Abgel Citrus will remove all types of dirt and grime, including oil, grease, swarf, some paints, creosote, tar products, adhesives, chemicals, powders, printing inks, crayon and marker pens. The use of a beaded hand gel is particularly advantageous in the removal of dry solid grime such as coal dust, cement and plaster, without skin abrasion. The gel itself holds the dirt and grime in suspension enabling them to be washed off with water. After use the hands are left soft, hygienically clean and pleasant smelling.

## Applications

Recommended for all industrial and commercial washrooms, including those in factories, workshops, construction sites, mines, quarries, farms and stables, where a powerful hand cleanser is required. Abgel Citrus is a stable formulation, and does not dry out or separate, when properly dispensed.

## Directions For Use

Do not wet hands, apply Abgel Citrus straight from the package and rub the hands together to loosen all the soiling. Rinse thoroughly and dry well. Where a barrier cream has been used prior to starting work, this is removed together with the dirt and grime and further washing with soap is unnecessary.

## General Properties

|                                  |  |
|----------------------------------|--|
| Appearance                       | Viscous Yellow Gel   |
| Odour                            | Citrus   |
| Flash Point (Abel closed cup) °C | N/A  |
| pH value at 25°C                 | 7.0  |
| Melting Point °C                 | 35 to 40   |
| Density g/ml                     | 0.980  |
| Shelf Life                       | Six months in dry conditions   |
| Active Ingredients               | A blend of synthetic detergents with polyethylene beads and non-petroleum-derived solvent. |
