

Product Information

K40EP, K400EP, K4000EP SEMI-FLUID GREASES

Description

This range of premium quality semi fluid greases have been designed for centralised lubrication systems. They are also suitable for anti-friction and plain bearings subjected to high load conditions and gearboxes designed to operate with a semi-fluid grease.

FEATURES

- Excellent extreme pressure and anti-wear performance.
- High degree of corrosion protection.
- Highly versatile semi-fluid greases for centralised lubrication.
- Designed for use in centralised lubrication systems, where they can be pumped at low temperatures.

Applications

K4000EP meets the requirements of Interlube, Mecafluid, Vogel, MAN and Daimler Benz for use in their centralised chassis lubricators.

K400EP is suitable for use in gearboxes, including those on power harrows, where a grade of this type and consistency is required.

K40EP is recommended for gears, plain and anti-friction bearings where an NLGI 0 is specified and for industrial and agricultural purposes where the use of a semi fluid or very soft product is essential or desirable.

As with all greases used for the first time, check compatibility with the grease applied previously and if necessary purge bearings prior to application. Likewise, as a general rule, take care not to over-lubricate and apply the quantity of grease recommended by the bearing manufacturer.

Physical Characteristics

Grade	K4000EP	K400EP	K40EP
Appearance	Red	Dark Brown	Red
NLGI consistency	000	00	0
