

Product Information:

DIESEL FUEL TREATMENT

Description

Diesel Fuel Treatment has been formulated to protect and clean the entire fuel system and keep it clean. The active technology removes any built up carbon and ash from injector nozzles, re-establishing an effective spray pattern resulting in improved fuel efficiency. Additionally, Diesel Fuel Treatment will clean up intake valves and reduce combustion chamber deposits, further contributing to efficiency, improved power and reduced emissions.

Features and Benefits

- Compatible with all types of diesel including bio-diesel
- Boosts cetane up to 2.5 units (dependant on fuel quality)
- Improves cold starting & combustion
- Regular use prevents a recurrence of soot and ash build up
- Increases lubrication ability of fuel – improves pump & injector life
- Protects the fuel system against corrosion
- Does not harm the DPF, EGR, Turbo or SCR systems

Directions for Use

- Add directly to the fuel tank.
- For optimum cetane improvement, one 250ml bottle of Diesel Fuel Treatment will treat up to 50 litres of fuel.
- For a thorough engine clean up, use one 250ml bottle of Diesel Fuel Treatment in three consecutive tanks of fuel.
- To help maintain optimum valve and injector cleanliness, use half a bottle per 50 litres of fuel.

Part No.: DFT250

(TDS Diesel Fuel Treatment – 211025 Issue 1)
